

Introduction

This is the server side report for CAB230 assessment. This server side application has implemented all requirement. The table below shows the completion of the application

End point	states
/register	DONE
/login	DONE
/search	DONE
/offences	DONE
/areas	DONE
/ages	DONE
/genders	DONE
/years	DONE
Non-functional Requirement	States
https	DONE
Password hashed	DONE

Technical description

Technical	Description
NodeJs	JavaScript environment http server
Express	Nodejs web framework for building API
Sequelize	Nodejs promise-based ORM
Bcrypt	Password hashing function for protecting passwords
Helmet	Express HTTPS security header. Increase the security of the express
Json web token (JWT)	RFC 7519 standard authorization token signature signed by private key
Mysql	Open-source relational database management system

Security

Technical	Description
JWT Token This system used JWT token for securely transmit information between front-end and backend. It is hashed with HS256 algorithm signed with the secret code. With the JWT token, it can successfully prevent information integrity, even the data with in the JWT token is public to anyone who gets the token.	<div>HEADER: ALGORITHM & TOKEN TYPE</div> <pre>{ "alg": "HS256", "typ": "JWT" }</pre> <div>PAYLOAD: DATA</div> <pre>{ "sub": "1234567890", "name": "John Doe", "iat": 1516239022 }</pre> <div>VERIFY SIGNATURE</div> <pre>HMACSHA256(base64UrlEncode(header) + "." + base64UrlEncode(payload), your-256-bit-secret) secret base64 encoded</pre>

<p>Hashed password</p> <p>The photo on the right hand side is the user database table, it shows the email and password. The password in the image is in an hashed format, this format is called bcrypt password hashing with salt password, which has a strong protection against rainbow table attacks.</p>	
<p>Helmet header</p> <p>Helmet provides some various of https header protection for the express sever which prevent DNS prefetching, clickjacking, remove X-Power,Xss protection and others basic security protection</p>	<pre>const helmet = require('helmet') const swaggerUI = require('swagger-ui-express') const swaggerDocument = require('./docs/swagger.json') var app = express(); app.use(helmet()) Strict-Transport-Security: max-age=15552000; includeSubDomains X-Content-Type-Options: nosniff X-DNS-Prefetch-Control: off X-Download-Options: noopen X-Frame-Options: SAMEORIGIN X-XSS-Protection: 1; mode=block</pre>
<p>https</p> <p>Https namely HyperText Transfer Protocol Secure that provide extended security protection for http. It is commonly used nowadays to keep information communication securely.</p>	<p>▼ General</p> <p>Request URL: https://172.22.30.8:8443/offences</p>

Testing and limitation

For testing the API, the server side has implemented swaggerJS in order to try out the api result manually. The testing swagger testing link is: <https://172.22.30.8:8443/>

Testing Scenario: Register

Test Case	Request	Response	Result
Register with a new user email	<p>Request URL: https://172.22.30.8:8443/register</p> <p>Request body:</p> <pre>{ "email": "newUsesr@gmail.com", "password": "demouserpassword" }</pre>	<p>Code status: 201</p> <p>Response body:</p> <pre>{ "message": "yay! you've successfully registered your user account :)" }</pre>	CORRECT
Register a existing user email	<p>Request URL: https://172.22.30.8:8443/register</p> <p>Request body:</p> <pre>{ "email": "newUsesr@gmail.com", "password": "demouserpassword" }</pre>	<p>Code status: 400</p> <p>Response body:</p> <pre>{ "message": "oops! It looks like that user already exists :(" }</pre>	CORRECT

		}	
--	--	---	--

esting Scenario: Login

Test Case	Request	Response	Result
Login with an existing user email	Request URL: https://172.22.30.8:8443/login Request body: <pre>{ "email": "newUsesr@gmail.com", "password": "demouserpassword" }</pre>	Code status: 200 Response body: <pre>{ "token": "eyJhbGciOiJIUzI1NiIsInR5cCI6IkpXVCJ9.eyJ1c2VyIjp7Im1kIjo2LCJ1bWFpbCI6Im5ld1VzZXNyQGdtYWlsLmNvbSJ9LCJpYXQiOiJlNTkyMTI2MTksImV4cCI6MTU1OTI5OTAxOX0.itV5MMWB9H0FxtN7NQKFobBbxue7PPsrqCnZ5uF41Gs", "access_token": "eyJhbGciOiJIUzI1NiIsInR5cCI6IkpXVCJ9.eyJ1c2VyIjp7Im1kIjo2LCJ1bWFpbCI6Im5ld1VzZXNyQGdtYWlsLmNvbSJ9LCJpYXQiOiJlNTkyMTI2MTksImV4cCI6MTU1OTI5OTAxOX0.itV5MMWB9H0FxtN7NQKFobBbxue7PPsrqCnZ5uF41Gs", "token_type": "Bearer", "expires_in": 86400 }</pre>	CORRECT
Login with Wrong user detail	Request URL: https://172.22.30.8:8443/login Request body: <pre>{ "email": "newUsesr@gmail.com", "password": "wrongpassword" }</pre>	Code status: 401 Response body: <pre>{ "message": "invalid login - bad password" }</pre>	CORRECT

Testing Scenario : Help

Test Case	Request	Response	Result
Get all offences	Request URL: https://172.22.30.8:8443/areas	Code status: 200 Response body: <pre>{ "offences": ["Advertising Prostitution", "Armed Robbery", "Arson", "Assault", "Attempted Murder", ...] }</pre>	CORRECT
Get all Areas	Request URL: https://172.22.30.8:8443/areas	Code status: 200 Response body: <pre>{ "areas": ["Aurukun Shire Council", "Balonne Shire Council", "Banana Shire Council", "Barcaldine Regional Council",] }</pre>	CORRECT

		<pre> "Barcoo Shire Council", ...] } </pre>	
Get all ages	Request URL: https://172.22.30.8:8443/ages	Code status: 200 Response body: <pre> { "ages": ["Adult", "Juvenile"] } </pre>	CORRECT
Get all genders	Request URL: https://172.22.30.8:8443/genders	Code status: 200 Response body: <pre> { "genders": ["Female", "Male", "Not stated",] } </pre>	CORRECT
Get all years	Request URL: https://172.22.30.8:8443/years	Code status: 200 Response body: <pre> { "years": [2001, 2002, ...] } </pre>	CORRECT

Testing Scenario : Search

Test Case	Request	Response	Result
Search with validate JWT token	Request URL: https://172.22.30.8:8443/search?offence=Homicide(Murder)&area=Banana%20Shire%20Council&age=Adult&gender=male&year=2001&month=2	Code status: 200 Response body: <pre> { "query": { "offence": "Homicide (Murder)", "gender": "male", "year": "2001", "age": "Adult", "area": "Banana%20Shire%20Council", }, "result": [{ "LGA": "Aurukun Shire Council", "total": 4, "lat": -27.470812, "lng": 153.022455 }] } </pre>	CORRECT

		<pre> }] } </pre>	
Search without offence query parm	Request URL: https://172.22.30.8:8443/search	Code status: 400 Response body: <pre> { "message": "oops! it looks like you're missing the offence query parm" } </pre>	CORRECT
Search with invalidate JWT token	Request URL: https://172.22.30.8:8443/search?offence=Homicide(Murder)&area=Banana%20Shire%20Council&age=Adult&gender=male&year=2001&month=2	Code status: 401 Response body: <pre> { "message": "oh no! it looks like your authorization token is invalid..." } </pre>	CORRECT
